Safeguarding Identity

Globalisation and the Internet have given the world greater mobility and flexibility. However, document fraud and identity theft have left us more vulnerable than ever before. We support governments and public authorities around the world by providing innovative solutions to such problems: by seamlessly blending leading technology with competent and responsible consultation tailored to the specific national and international requirements for protecting citizen identity.

Innovative Security Design and Technologies

We draw from more than 25 years of eID experience, from the development and integration of security features using the latest security design software and technologies to the creation of highly secure and distinctive designs using overt, covert and forensic security elements. Besides applying different security printing techniques on the card body, our eID cards also have electronic cryptographic capability (use of embedded IC chip) to prove authenticity.

Our Secure Solutions

We offer comprehensive, sustainable, highly adaptive, and customisable Trusted Identification software and solutions that are built on secure platforms and architecture. Our proven solutions unify security, inventory, workflow, and lifecycle requirements while managing enrolment, production, issuance of physical, electronic and digital documents such as identity cards, ePassports, driver's licenses, voter cards, travel visas and many more.

Why IRIS ?

We are a globally recognised dual-certified security printer and technology-driven company. Our experience of more than 25 years has allowed us to pioneer numerous break-through identity products and solutions for greater national and trans-border security - inventing the world's first ePassport and the world's first multi-application National ID card. Our comprehensive range of trusted identification solutions span the globe. From the manufacture of smartcards and secure travel documents to the devices and software architecture required for authentication, we continue to integrate disparate technologies that are Innovative, Relevant, Intelligent and Secure to bring to life solutions that are sustainable.
